

Dear Author

Thank you for your interest to PMAPS 2012. Notification of acceptance has already been sent to email accounts of the corresponding authors.

Note that, in order for your Paper to be included in the Proceedings

1. Your Final IEEE Xplore-compatible Manuscript, revised in accordance with reviewers' comments, must be uploaded ONLINE latest by 15 April,2012.
2. Your Electronic Copyright Transfer Form (eCF) is submitted by 15 April 2012;
3. At least one of the authors of your paper must register latest by 15 April 2012 and Author registration payment must be made by 15 May 2012.
4. The paper must be presented at the conference.

Check the conference WEB site <http://www.pmaps2012.itu.edu.tr/> for details.

PAPERID	TITLE	Correspondin Author
6	DG Planning by Optimizing Distribution System Techno-commercial Attributes	Nilanjan Senroy
8	Optimal Operation of Series Connected Turbines for Off-shore Wind Parks.	Alejandro Garces
10	Studies on Voltage Drops Caused by Intermittent Loads Using Gram-Charlier Series Expansion	Ying-Yi Hong
11	Probabilistic Generation Expansion Planning using Z-Method	Jamshid Aghaei
12	Averaging Operating States with Infinite Mixtures in Reliability Analysis of Transmission Networks	HÅƷkon Kile
13	Wind Power Modeling in Power System Reliability Evaluation Using Sequential Simulation	Roy Billinton
14	Online reliability assesment of power system	arne brufladt svendsen
15	Multi-Criteria Design of a Hybrid Power System with Stochastic Supply	Ahmed Saif
17	Optimizing of IP Speed Controller in FOC of Induction Motor Using Particle Swarm Optimization	ben attous djilani
18	A Simulation Study of the Gas Characteristics Effect on Surface Discharges Apparition between Electrode and Dielectric Layer	Seghier Tahar
21	Adequacy Impacts of Wind and Hydro Coordinated Operation in Power Systems	Rajesh Karki
24	Optimal Demand Response Program for Best Load Profile Reformation Using an Adaptive Technique in Smart Grids	Hassan Abniki
26	Effects of Maintenance on Reliability of Probabilistic Maintenance Models	Saranga K Abeygunawardane
27	A Comparative Study of State Selection Techniques in Voltage Stability Probabilistic Assessment of Composite Systems	Maria da Guia da Silva
28	Fault Trees Applied to Protection System Reliability Analysis	George Anders

29	Assessment of Spare Breaker Requirements	Gomaa Hamoud
32	Multicriterial Optimization of Investment Costs in Case of the Reliability Centered Maintenance	Ingo Jeromin
35	Probabilistic Small Signal Stability Analysis of a Power System Consisting Intermittent wind Generation	Temitope Raphael Ayodele
36	The Evaluation Of A RCAM Model For 150 And 250 MVA Power Transformers Of Turkish National Transmission System Using Markov Procedure	H. Aysun KÃ–KSAL
37	A Novel Hybrid Filter Topology for Harmonic Current Suppression and Power Factor Correction	Samet Biricik
38	Adaptive Reclosing Strategy Based on Estimation of Distributed Generation Penetration Level	Hossam Talaat
39	Latin Hypercube Sampling for the Probabilistic Evaluation of Composite Power System Reliability	Lingfeng Wang
40	A Probabilistic Second Supply Source Model to Enhancing Service Reliability of a Major Distribution Load	Ali Chowdhury
41	A Multi-Area Approach for Evaluating the Impacts of HVdc Transmission System Forced Unavailability on Power System Resource Adequacy	Bagen Bagen
43	Strategic investments and regulatory framework for distribution system planning under uncertainty	Marc Osthues
44	Hybrid Enumeration and Conditional Probability Approach for Reliability Analysis of Power Systems with Renewable Energy Sources	Bordin Bordeerath
46	Observer Based Fault Tolerant Control for Uncertain T-S Fuzzy Models: an LMI Approach	Sabrina Aouaouda
47	The Effects of Uncertainty in Mechanical Parameters on SSR in Meshed Power Networks with Different HVDC Technologies	Jovica Milanovic
48	Cable Segment Replacement Optimization	Patrik Hilber
49	Voltage-Security Constrained VAR Dispatch Considering Wind Power Variability	El-Said El-Sayed El-Araby
50	Influence of Different Wind Turbine Types Failures on Expected Energy Production	Danijel TopiÄ±
51	Reliability of Power System in Relation to Nuclear Power Plant Safety	Marko Cepin
52	Capacity Value of Additional Generation: Probability Theory and Sampling Uncertainty	Chris Dent
53	Stochastic Security Constrained Unit Commitment Incorporating Demand Side Reserve	Seyed Hamid Hosseini
54	Scenario-Based Generation Expansion Planning for a Regional Electricity Network in Iran	Mohsen Gitizadeh
55	Pseudo-Measurement Placement For Reliable State Estimation	Ali Abur
56	Stochastic Modeling of Multi-Area Wind Power Production	Anthony Papavasiliou
57	Reliability Evaluation of the 2-out-of-3 Voting Gates Structure in a Generation Rejection Scheme Using Markov Models	Kai Jiang
58	A Probabilistic Partial Order Theory Approach to IT Infrastructure Selection for Electric Smart Grids	Alireza Fereidunian

59	Security of Supply in Active Distribution Networks with PHEV Based Strategic Micro-Grids	Dilan Jayaweera
60	Applying a Probabilistic Approach to Transmission Network Reliability Assessment	Milton Edimu
62	Smart charging of plug-in vehicles under driving behaviour uncertainty	Marina González Vayá
63	Weighted and Constrained Consensus for Distributed Power Flow Control	George Yin
64	Offering Strategies for a Wind Power Producer considering Uncertainty through a Stochastic Model	J.P.S. Catalão
65	Comparison of Wake Models for Reliability Analysis	Hagkwen Kim
66	Application of a hybrid Taguchi-genetic algorithm to the optimal PMU placement in wide area measurement systems	Abdelmadjid Recioui
67	An investigation into the Effects of Complex Supply Voltage Unbalance on Squirrel Cage Induction Motors	Fatma Zohra Dekhandji
68	New Intelligent Approach in Short-Term Electricity Prices Prediction Towards Reducing Uncertainty	J.P.S. Catalão
69	State Estimation Method for on-line Express Analysis of Available Transfer Capability of Transmission Lines	Anna Glazunova
70	Bidding Strategy for Wind Generators Considering Uncertainties in the Wind Velocity and Market Price	Shrestha Govinda
71	Wind Speed Time Series Generation for Dynamic Analysis: A Proposal	FIDEL FERNANDEZ-BERNAL
72	Generation of Domestic Load Profiles - an Adaptive Top-Down Approach	Christof Bucher
73	Customer interruption costs (CICs) for composite power system reliability analysis	Oliver Dzobo
74	Optimal Distributed Generation Placement in Radial Distribution Systems	Mohammad Reza Andervazh
75	Fault Management at a Distribution System Operator	Carl Johan Wallnerström
77	Transmission Expansion Planning Including Unreliability Costs	Armando Leite da Silva
79	Comparison between Different Cross-Entropy Based Methods Applied to Generating Capacity Reliability	Armando Leite da Silva
80	Risks, Load Shedding and System Separation during Emergency Situations	Diana Zalostiba
81	Hydro Turbine Speed Control based on Adaptive Disturbance Rejection and State Space PI Controller	Teofana Puleva
82	Representation of Wind and Load Correlation in Non-Sequential Monte Carlo Reliability Evaluation	Carmen Borges
83	Blackout PRA based identification of critical initial conditions and contingencies	Pierre Henneaux
84	A Comparison of Forecast Error Generators for Modeling Wind and Load Uncertainty	Ning Lu
85	Reliability Evaluation of Underground Cable Systems used in Transmission Networks	Bart Tuinema

86	A Framework to Determine the Probability Density Function for the Output Power of Wind Farms	Alejandro Dominguez-Garcia
87	Reliability Analysis of Alternate Wind Energy Farms and Interconnections	Dongbo Zhao
88	A robust reserve scheduling technique for power systems with high wind penetration	Kostas Margellos
91	Optimized Adaptive Protection for Distribution Systems Penetrated with Distributed Generation	Ahmed Osman
92	Forecast of electrical equipment condition using Markov chains	Mustafa Kizilcay
93	Examining Information Entropy Approaches as Wind Power Forecasting Performance Metrics	Bri-Mathias Hodge
95	Probabilistic Benefit/Cost Analysis in Transmission System Planning	Wenyuan Li
96	Comparison of Wind Power Bidding Strategies under Probabilistic Forecasts	Hugo A. Gil
97	Wind Turbine Generator Reliability Model considering Wind-speed Dependent Outage Rate	Manjun LIU
99	A Random Switching Method for PWM Cascaded H-Bridge Multi-level Inverter	Mohammad Mardaneh
100	A Probabilistic Method for Electricity Market Evaluation Considering High Risk Events with Low Probability	Yusheng Xue
101	GenCo's Bidding Strategy with Risk Consideration using Self-organizing Hierarchical PSO	Chanwit Boonchuay
102	short-term load forecasting using RBF neural network and ANFIS in real-time price environment considering market elasticity	hadi ahmadi
103	Condition Monitoring Benefit for Offshore Wind Turbines	Sebastian Thns
104	An aggregate network model acquired by elimination of frequency dependent load nodes	Eduard Antonov
106	Study of test equations method's application for bad data detection in PMU measurements.	Elena Korkina
107	Short-Term Load Forecasting Without Weather Data: A Comparison Study	dil IKLI
108	Monitoring vulnerability in power systems. Extraordinary events, analysis framework and development of indicators	Gerd Kjlle
109	Towards Reliability Centred Maintenance of Wind Turbines	David McMillan
110	Impact of Retro Fits and Post-Warranty Failures on Wind Farm Maintenance Cost	David McMillan
111	Active Power Compensation in Industrial Applications Using Statcom with Supercapacitors	Alexander Yanushkevich
112	Impact of Natural Gas Network Reliability on Power Generation Availability	Carmen Borges
113	Probabilistic guarantees for the N-1 security of systems with wind power generation	Maria Vrakopoulou
114	Probabilistic Identification of Power System Reliability Map	Jovica Milanovic
115	Analysis and comparison of distribution system costs, dependant on underground cable and overhead lines' fault probabilities and maintenance cost difference	Ilze Priedite-Razgale
117	On Improvements of Power Transformer Condition Monitoring by Considering Thermal Models	Johanna Rosenlind
118	Estimating Dynamic Response of a Synchronous Generator with Uncertain Parameters by Applying the Spectral Collocation Method	Rastko Zivanovic

119	Augmented Lagrange Hopfield Network for Combined Economic and Emission Dispatch with Fuel Constraint	Weerakorn Ongsakul
120	A Novel Control Scheme of DGs Considering Operation Uncertainties in a Microgrid with Renewable Energies	Hong-Tzer Yang
121	Probabilistic Estimation of Systemwide Electric Vehicle Charging Demand	Shrestha Govinda
123	Application of Risk Assessment Method for Power System Interconnection Cost and Benefit Evaluation	Anna Mutule
125	A Pre-Study Towards Investigating the Art of Choosing Right Level of Input Data	Carl Joan Wallnerström
126	Quantifying Spinning Reserve in Systems with Significant Wind Power Penetration	Guodong Liu
127	Probabilistic Method for Wind Production Forecasting and Energy Markets Trades Optimization in Power System with Large Wind Specific Gravity	Irina Oleinikova
128	Time Based Maintenance Optimization of Medium Voltage Network Components using LCC Analysis	Jochen Böhler
129	Reliability Assessment of DC Wind Farms	Himanshu Bahirat
130	Advanced Fault Location Algorithm and Impact on Optimized Repair Crew Dispatch	Yimai Dong
131	Simulation approaches in cascading risk assessment	Emanuele Ciapessoni
132	Design of a Load Management System for Electric Vehicles Based on a Stochastic Model	Johannes Rolink
133	Stochastic dynamic programming for unified short and medium-term planning of hydro power considering market products	Hubert Abgottspon
134	Assessment of Optimum Design Return Period of a Proposed HVDC Line	Asim Haldar
135	Challenges in Smart Grid Reliability Studies	Vijay Venu Vadlamudi
136	Transfer Function Modeling of Wind Farm Characteristics using Dynamic Regression	Binayak Banerjee
137	Probabilistic Power Flow Simulation allowing Temporary Current Overloading	Wander Wadman
139	A method for sizing DG onto the buses of a Medium Voltage Distribution Network by Monte Carlo Simulation	Giovanni Sansavini
141	Shape Optimisation of Permanent Magnets for Eddy Current Loss Reduction in Permanent Magnets Synchronous Machine Using Probabilistic Approaches	Belli Zoubida
142	Metaheuristic Optimization of Electric Vehicle Charging Strategies in Uncertain Environment	Stephan Hutterer
145	Probability-weighted LMP and RCP for Day-Ahead Energy Markets using Stochastic Security-Constrained Unit Commitment	Erik Ela
146	Determining Capacity Credit for Wind used in MISO Resource Adequacy	Brandon Heath
147	Efficiency and emission impacts of part-load and cycling operation at fossil fuel fired power plants	Greg Brinkman

148	Assessment of the Network Reliability Calculation in Transmission System Development Tasks	Artjoms Obushevs
149	Three Phase Probabilistic Load Flow in Radial Distribution Networks	Aleksandar Dimitrovski
150	Wind Farm Capital Cost Regression Model for Accurate Life Cycle Cost Estimation	David McMillan
151	Web Based Online Real-time Outage Cost Assessment Information System of Power System	JinTaek Lim
152	A Transientsâ€™ Study of an Algerian Power System Network Based on ATP Software	Saliha Boutora
154	BEHAVIOR OF THE REACTIVE POWER COMPENSATION FROM SYNCHRONOUS FROM MAGNETIC DIAGNOSTICS	BRAHIM HAMAIDI
156	Web Based Online Realtime Information System considering Demand Side Management for Power Systems including Wind Turbine Generators	Jintaek Lim
160	Optimal Spinning Reserve Considering Customer Reliability, Load Forecast Uncertainty, and Wind Generation Intermittency	Amir Mehrtash
161	Impact of Wind Curtailment Price on Day Ahead Energy Market Clearing	Cem Sahin
162	Sizing of Renewable Energy Source for Profit Maximization of Individual Power Plant in Transmission Network	Jin-O Kim
166	A New Energy Storage Sizing Technique Considering Ramp Rates of Conventional Generators	zhiyong gao
170	A Hybrid PSO and GA for Generation Allocation Problem Optimization	benhamida Farid
173	Optimal Operation Scheduling of Pumped Storage Hydro Power Plant in a Power System with a Large Penetration of Photovoltaic Generation Considering both Reliability and Fuel Cost	Ryota Aihara
174	A Probabilistic Approach for Multiobjective Optimal Allocation of Voltage Regulators and Capacitors in Three-Phase Unbalanced Distribution Systems. Part II: Numerical Applications	Angela Russo
175	A Probabilistic Approach for Multiobjective Optimal Allocation of Voltage Regulators and Capacitors in Three-Phase Unbalanced Distribution Systems. Part I: Theoretical aspects	Angela Russo
176	Probabilistic ramp detection and forecasting for wind power prediction	Vladimiro Miranda
177	Reserve optimization to improve operational reliability in deregulated power system with PV power penetration	QIAN ZHAO
179	An Observation Of A Nonlinear Power System Behavior Leading To Chaos In The 3-Dimensional State Space	Leyla KURU
181	Implementation of Supply Function Equilibrium Model in a Pay-as-Bid, Incomplete Information Electricity Market: Case study of Iran Electricity Market	Asad Lesani
182	Application of the Artificial Bee Colony algorithm to the Optimal Power Flow with incorporation of FACTS devices	Tarek Bouktir
184	Power System Control Applications Based on Artificial Bee Colony Algorithm: Literature Survey and Case Study	Haluk GÃ–ZDE

187	Risk Limiting Dispatch: Empirical Study	Ram Rajagopal
189	A Probabilistic Methodology for Transmission Planning under Severe Uncertainties	Eleftheria Contaxi
190	A Novel Fuzzy-Logic-Control for a Z-Source Inverter as a Transformer-Less Grid-Connected Photovoltaic Power Conditioner	Javad Olamaei
192	Reliability Assessment of Double Price Cap Electricity Market: Collective Contribution of Non-Pivotal Firms to Capacity Withholding	Mahmoud-Reza Haghifam
194	CDF-Based reliability insurance contracts	Mahmoud-Reza Haghifam
195	Optimal Flexible Solutions of Transfer Capability Assessment	Muhammad Murtadha Othman
197	Probabilistic Small Signal Stability Analysis of power systems Containing Wind turbine	M. Mohammadi
202	Evaluating the Performance of Small Autonomous Power Systems using Reliability Worth Analysis	Pavlos Georgilakis
204	Risk-Based Demand Response Scheduling for Optimal Spinning Reserve Provision	Mahmoud-Reza Haghifam
206	DTC WITH SVM BASED ON HYSTERESIS Applied to the synchronous machine	Bourourou Fares
207	A Modified Minimal Cut Set Algorithm of Distribution System Reliability with Distributed Generator	Congqi YE
208	Dynamic Stability Analysis for Damavand Power Plant Considering PMS Functions by DIGSILENT Software	Ali Parizad
209	Reactive Power Compensation in Transmission System Considering Static Load Modeling	Babak Safari Touraj
210	Optimal Spinning Reserve Allocation in Electricity Markets Using Cost/Benefit Analysis	Mohammad hossein Ranjbar
211	Scenario Reduction Based Economic Load Dispatch in a Power System Incorporating Wind Power	Mohammad hossein Ranjbar
212	Multivariate Stochastic Modeling of Plug-in Electric Vehicles Demand Profile within Domestic Grid	Ehsan Pashajavid
213	A Copula-based Semiparametric Markov Model of Wind Generation	Hamed Valizadeh Haghi
214	A Hybrid Approach to Investigating the Distributional Aspects Associated with Reliability System Indices	Mauro Rosa
215	Research on Hidden Failure Reliability Modeling of Electric Power System Protection	Jingjing Zhang
216	Reliability Evaluation of Generation Systems via Sequential Population-Based Monte Carlo Simulation	Mauro Rosa
217	Monte Carlo Simulation of Community Wind Generation in Rural Western Kansas	Anil Pahwa
218	Evaluating the Impact of Wind Power Uncertainty on Power System Adequacy	Esteban Gil
219	Development of Current Harmonic Estimation Method by Extreme Learning Machine	Jae-Yoon Lim
220	Reducing Day Ahead Market Statistical Modeling Uncertainties by Clustering	Dan Apetrei

221	Tuning of UPFC and PSS Parameters for Improvement of Power System Stability Using HSA	mehrdad hamidian
223	Imperialist Competitive Algorithm for Optimal Design of the PID Controller for an AVR System	Serhat Duman
224	Solving Optimal Power Flow Problem with Gravitational Search Algorithm	Serhat Duman
225	Availability of power plant supply during major failures in the 380 kV transmission system	Marco Fleckenstein
226	Forecasting Spatial Average Insolation in Electric Utility Service Area based on Multi-Regional Weather Forecast	Takeyoshi Kato
228	An Elitist Artificial Bee Colony Based Size and Location of Distributed Generation in Radial Distribution System for Loss Minimization	Ranjit Roy
229	A New Scheme to Uninterrupted Working after Separating the Wind Power Plant to Grid.pdf	RASOUL MORADTALAB
